

**Aquatic &  
Coastal  
Environments**

# Environmental Services

Delivering innovative and defensible solutions for Mining, Energy & Agriculture

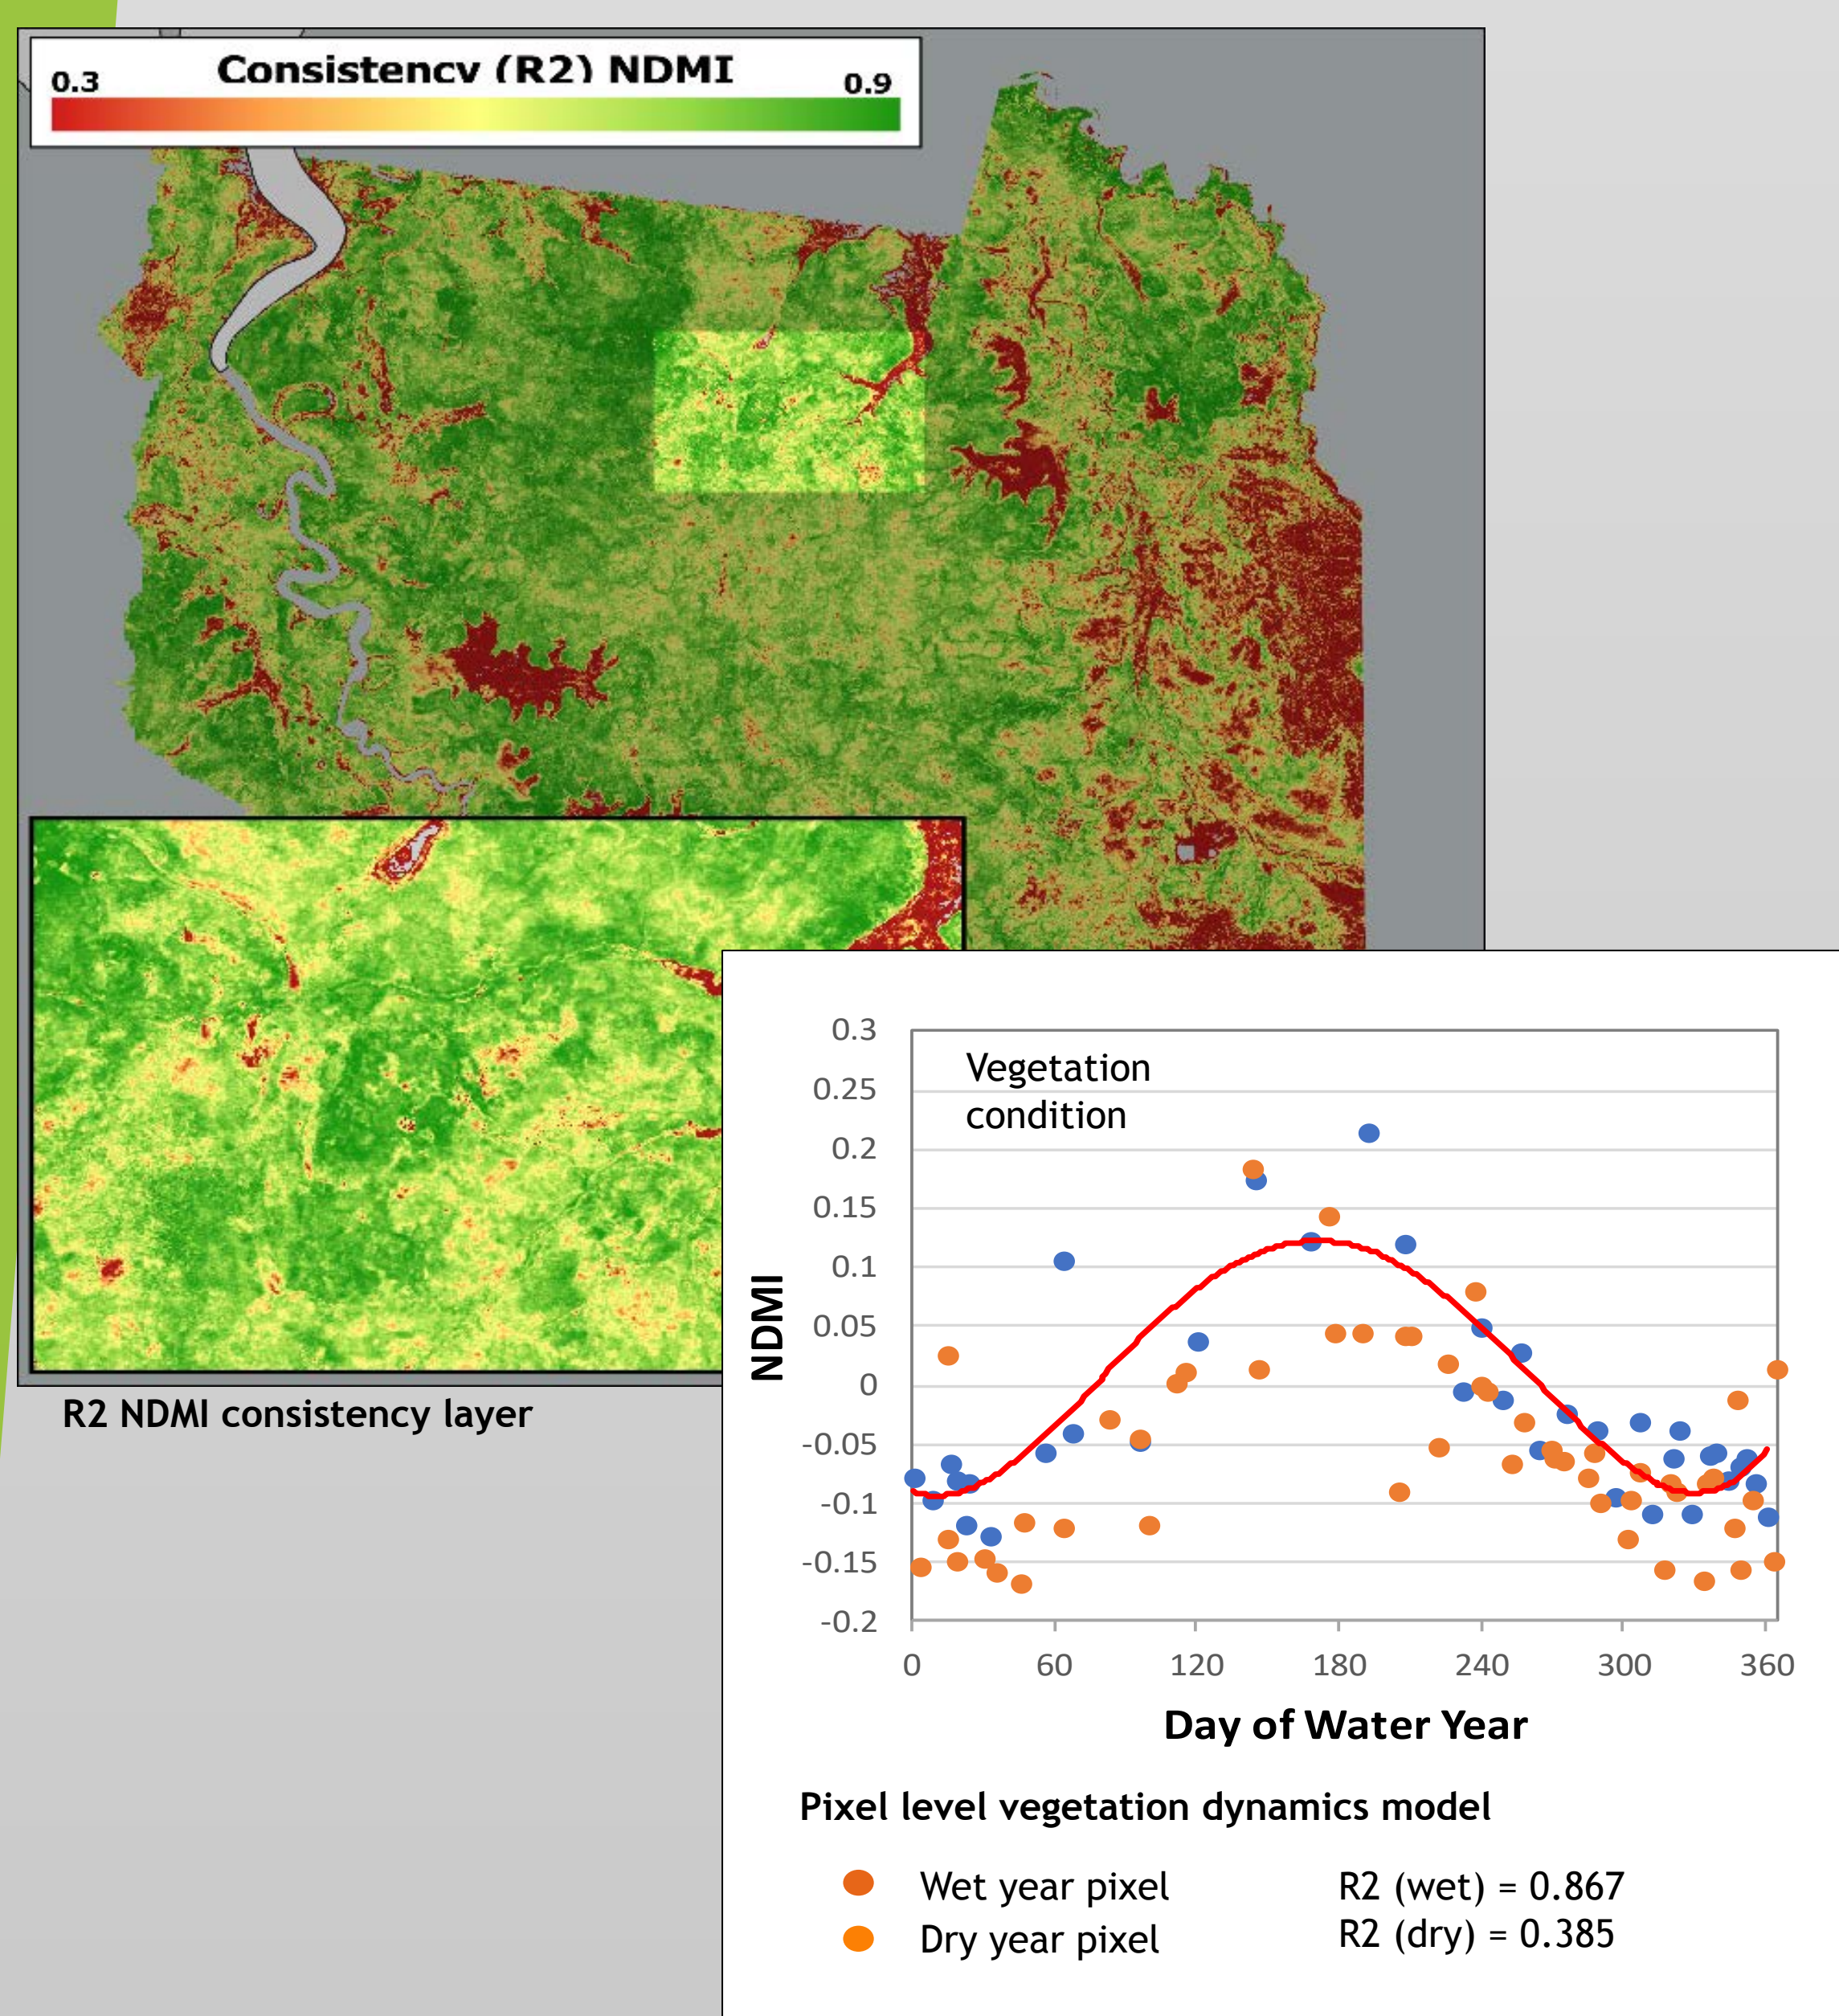

## Water and Sediment Quality Monitoring

- Baseline assessments for EIS
- Monitoring design and optimisation
- Compliance monitoring for on-going operations
- Contaminant assessment against Australian guidelines (ANZG, NEPM, FANZ etc.)
- Waste-water discharge monitoring and impact assessment

## Aquatic Ecology

- Ecosystem characterisation and community level impact detection
- Habitat assessment and change analysis
- Macroinvertebrate, fish and diatom sampling

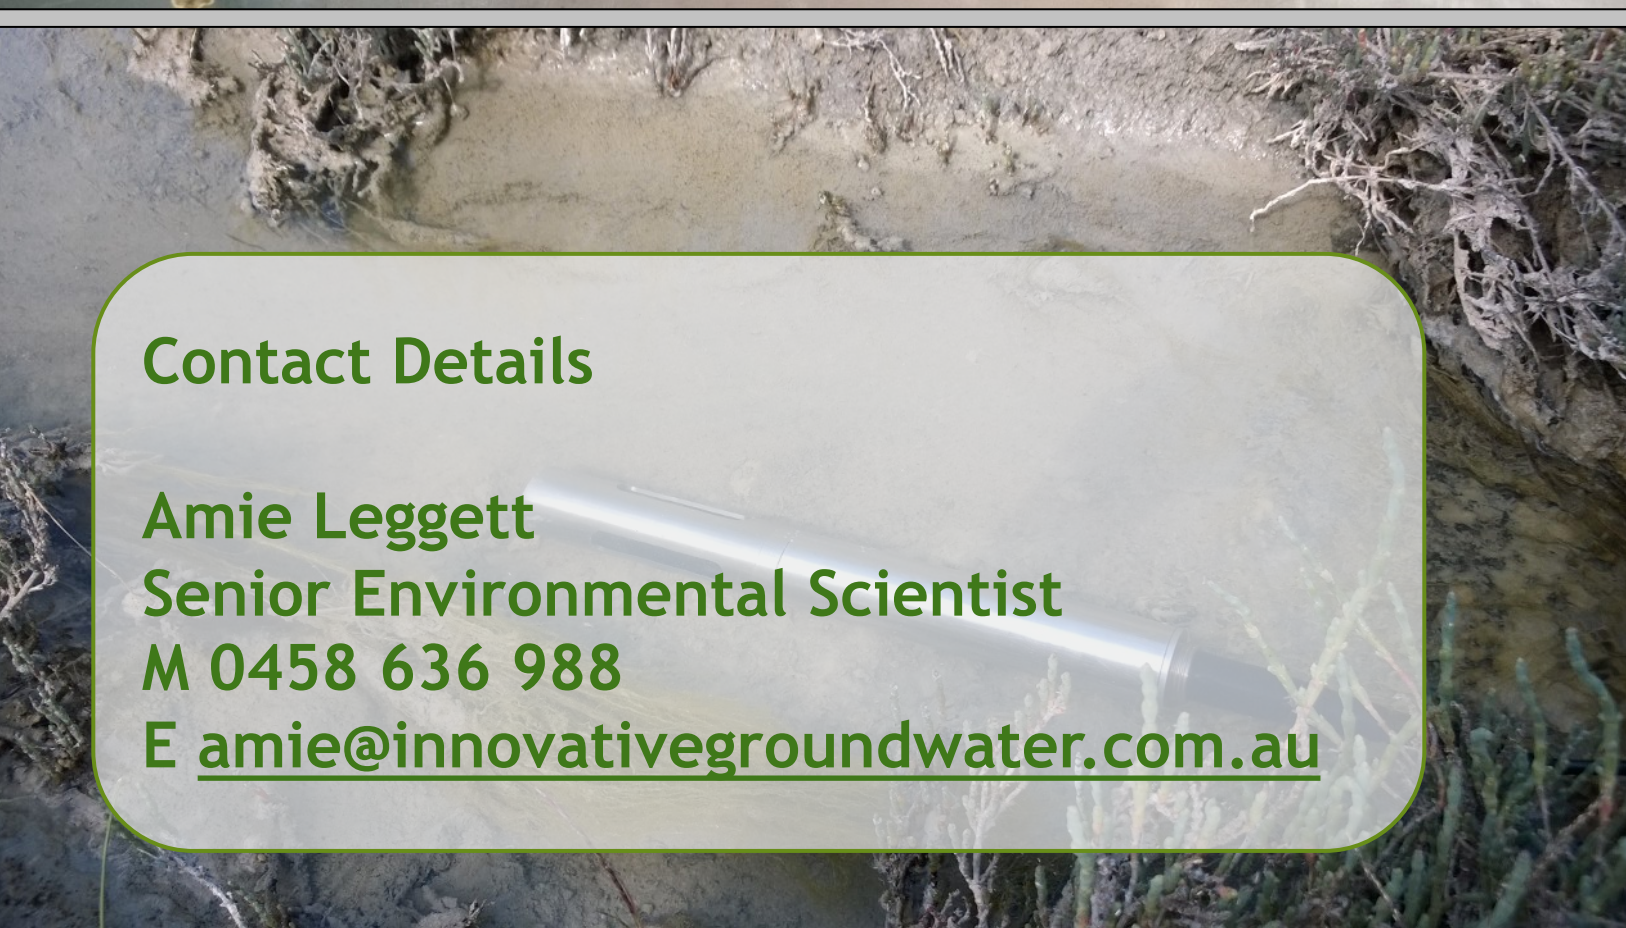

## Remote Sensing

- Telemetered monitoring networks for remote installations
- Vegetation / land cover assessment using satellite and aerial imagery

## Coastal Studies

- Water and sediment quality for impact assessment, compliance monitoring and dredge assessments
- Bio-monitoring to assess contaminant accumulation
- Coral / habitat monitoring and change analysis
